Enhanced service continuity at the key 36° East orbital position

Eutelsat Group has procured the new EUTELSAT 36D satellite, to succeed EUTELSAT 36B at 36° East.

Delivering over 1100 TV channels to millions of homes across a vast footprint, 36° East is a key orbital slot for broadcasters. Home to two powerful satellites, EUTELSAT 36C and EUTELSAT 36D, together they support the broadcast business of several major anchor customers.

With 70 physical Ku-band transponders, the all-electric EUTELSAT 36D has assured the main legacy missions of EUTELSAT 36B, with enhancements to coverage areas and performance.

EUTELSAT 36D has also been selected by Airbus Defence and Space to carry its latest Ultra High Frequency (UHF) payload to support communications over the EMEA region.

Based on the state-of-the-art Airbus Eurostar Neo platform, the satellite was launched in March 2024.
